[4.] Help Iraq Build Government Capacity and Provide Essential Services – Electricity Overview

Daily Electricity Supplied and Estimated Demand in Iraq Since January 2004

- With average temperature dropping to the low 60s°F, electricity demand increased approximately eight percent in the last week (November 8-14).
- Scheduled seasonal maintenance is ongoing at power plants, resulting in decreased generation. The average daily electricity service for the week remained 91,000 MegaWatt hours.
- Baghdad average available electricity increased slightly to 10.9 hours per day. The national average was 14.3 hours per day.

[4.] Help Iraq Build Government Capacity and Provide Essential Services – Electricity, Water and Sanitation

Electricity:

- Under the Rapid Contracting Initiative (RCI), the US Project and Contracting Office (PCO) Electricity Sector has awarded nearly 200 of a total of 250 projects. To date, close to 60 projects have been completed. RCI focuses on direct contracting of smaller projects such as 11 to 33 kilovolt substations, laying of power cables, installation of power poles and running of overhead power lines. Benefits of this program include reduced security costs, enhanced Iraqi project ownership, increased Iraqi employment, contracting opportunities for local firms and quicker completion time of projects.

Water and Sanitation:

- USAID and UNICEF are continuing work to improve the water and environmental sanitation facilities in Iraqi schools. The rehabilitation of water and sanitation facilities in 368 schools has been completed, while rehabilitation of an additional 178 schools is currently ongoing. Some further 206 schools are in the solicitation and bidding phase.
- PCO has completed 96 water treatment projects to date and has 105 more in progress. Under the Accelerated Iraqi Reconstruction Program, 51 water treatment projects have been completed and four more are under construction.

[4.] Help Iraq Build Government Capacity and Provide Essential Services – **Health Care, Telecommunication and Education**

Health Care:

- Following the recent drafting of a national strategy and guidelines on infant and young child feeding (IYCF) for Iraq and leveraging USAID grant funds, UNICEF is assisting the Ministry of Health (MoH) to lead a series of consultative and consensus building activities around the country. Meetings will be used to discuss the draft strategy with policymakers, health professionals and stakeholders to ensure the strategy effectively responds to current needs. The Iraqi national strategy, adapted from the Global IYCF Strategy outlined by the World Health Organization (WHO), will serve as a guide for action in the areas of feeding of infants and young children, complementary feeding, management of undernourished children, reduction of micronutrient deficiencies and approaches to addressing women's increased nutrient needs during pregnancy and lactation. After consultation meetings are completed during the next few months, the strategy will be finalized and endorsed by the MoH and implemented nationwide in cooperation with other concerned ministries.

Telecommunications:

- There are 4.8 million mobile phone subscribers in Iraq. The National Communications and Media Commission will soon issue a request for proposal for wireless local loop services, which will further increase the penetration of telecommunication services in Iraq.

[4.] Help Iraq Build Government Capacity and Provide Essential Services –**Education and Transportation**

Education:

- USAID partners have provided intermediate level computer training courses for over 735 government staff members. Over 75 of these training courses for staff from the Ministry of Education (MoE) have already been held as part of the capacity building and computer literacy project. By the end of the year, 1,000 members of the MoE staff will have received intermediate level computer training. Once completed, phase III of the training will start.
- Over 14,000 students will be enrolled in the Accelerated Learning Program (ALP) during the 2005-06 academic year in central and southern Iraq. While rural area projects typically lack local support, especially for female education, local communities and the local MoE directorates conveyed great enthusiasm for this project. The program will soon be expanded to northern Iraq. Local directorates in both Arbil and Sulaymaniyah have agreed to open ALP centers for 1,000 children in each of the two provinces this month. Kurdish versions of the textbooks have been delivered to a printing press for printing.

Transportation:

- Global Risk Strategies, a private security firm, continues to provide security services at Baghdad International Airport and is negotiating payments with the Ministry of Transportation.

- The chart shows average daily power production in megawatt hours (MWh). 120,000 MWh goal equates to 20 hours at 6000 MW average supplied load or 24 hours at 5000 MW average supply load. Currently supplies are not much improved over last year when judged by hours of power, but this is due in part to an influx of new appliances. This has dramatically altered demand and diluted the effect of increased generation capacity on actual results.

- NOTE: Production dropped in the south due to tankers unable to dock at the oil terminals due to bad weather and southern storage facilities are at full capacity. With no where to send the crude, field managers have lessened output. As of Monday, the weather cleared and the situation should return to normal in a matter of days.
- Iraq Petroleum Sector Facts:
 - There are three main refineries in Iraq: Bayji (North), Daura (Baghdad), and Basra (South).
 - There are several minor refineries (known as topping plants) dotted through the country: Kisik (Mosul), Qarrayah, Haditha, Tikrit, Nassiriyah, Maysan (Amarah), and Samawah. These primarily produce asphalt and low grade kerosene and diesel.
 - The majority of Iraq's oil infrastructure is antiquated and in need of modernization.
 - Domestically produced refined products (gasoline/benzene, diesel, kerosene, LPG) currently do not meet domestic demand because of sabotage to the pipeline infrastructure. Iraq will be dependent upon imports until the insurgents cease operations against oil pipelines.
